

AT32

Receiving Card

V1.1.1

Specifications

Change History

Document Version	Release Date	Description
V1.1.1	2021-02-06	Updated the packing information.
V1.1.0	2020-09-11	 Optimized the feature description. Optimized the dimensions diagram. Updated the maximum loading capacity.
V1.0.1	2020-04-09	Updated the firmware version.Updated the indicator description.
V1.0.0	2020-01-02	First release

Introduction

The AT32 is a general small receiving card developed by NovaStar. A single AT32 loads up to 512×384 pixels (NovaLCT V5.3.0 or later required). Supporting various functions such as pixel level brightness and chroma calibration, quick adjustment of dark or bright lines, 3D, individual Gamma adjustment for RGB, and image rotation in 90° increments, the AT32 can greatly improve the display effect and user experience.

The AT32 uses high-density connectors for communication to limit the effects of dust and vibration, resulting in high stability. It supports up to 32 groups of parallel RGB data or 64 groups of serial data (expandable to 128 groups of serial data). Its reserved pins allow for custom functions of users. Thanks to its EMC Class B compliant hardware design, the AT32 has improved electromagnetic compatibility and is suitable to various on-site setups.

Features

Improvements to Display Effect

- Pixel level brightness and chroma calibration
 Working with NovaLCT and NovaCLB, the
 receiving card supports brightness and chroma
 calibration on each LED, which can effectively
 remove color discrepancies and greatly improve
 LED display brightness and chroma consistency,
 allowing for better image quality.
- Quick adjustment of dark or bright lines
 The dark or bright lines caused by splicing of
 modules and cabinets can be adjusted to
 improve the visual experience. The adjustment
 can be easily made and takes effect immediately.

 In NovaLCT V5.2.0 or later, the adjustment can
 be performed without using or changing the
 - video source.

 3D function
 Working with the sending card that supports 3D

function, the receiving card supports 3D image

Individual Gamma adjustment for RGB
Working with NovaLCT (V5.2.0 or later) and the
sending card that supports this function, the
receiving card supports individual adjustment of
red Gamma, green Gamma and blue Gamma,

- which can effectively control image nonuniformity under low grayscale and white balance offset, allowing for a more realistic image.
- Image rotation in 90° increments
 The display image can be set to rotate in multiples of 90° (0°/90°/180°/270°).

Improvements to Maintainability

- Smart module (dedicated firmware required)
 Working with the smart module, the receiving
 card supports module ID management, storage
 of calibration coefficients and module
 parameters, monitoring of module temperature,
 voltage and flat cable communication status,
 LED error detection, and recording of the
 module run time.
- Automatic module calibration
 After a new module with flash memory is installed to replace the old one, the calibration coefficients stored in the flash memory can be automatically uploaded to the receiving card when it is powered on.
- Quick uploading of calibration coefficients

The calibration coefficients can be quickly uploaded to the receiving card, improving efficiency greatly.

- Module Flash management
 For modules with flash memory, the information stored in the memory can be managed. The calibration coefficients and module ID can be stored and read back.
- One click to apply calibration coefficients stored in module Flash
 For modules with flash memory, if the Ethernet cable is disconnected, users can hold down the self-test button on the cabinet to upload the calibration coefficients in the flash memory of the module to the receiving card.
- Mapping function
 The cabinets display the receiving card number and Ethernet port information, allowing users to easily obtain the locations and connection topology of receiving cards.
- Setting of a pre-stored image in receiving card
 The image displayed on the screen during
 startup, or displayed when the Ethernet cable is
 disconnected or there is no video signal can be
 customized.
- Temperature and voltage monitoring
 The temperature and voltage of the receiving card can be monitored without using peripherals.
- Cabinet LCD
 The LCD module of the cabinet can display the temperature, voltage, single run time and total run time of the receiving card.
- Bit error detection
 The Ethernet port communication quality of the receiving card can be monitored and the number of erroneous packets can be recorded to help troubleshoot network communication problems.
- NovaLCT V5.2.0 or later is required.

 Status detection of dual power supplies

When two power supplies are connected, their working status can be detected by the receiving card.

- Firmware program readback
 The receiving card firmware program can be read back and saved to the local computer.

 NovaLCT V5.2.0 or later is required.
- Configuration parameter readback
 The receiving card configuration parameters can be read back and saved to the local computer.
- LVDS transmission (dedicated firmware required)
 Low-voltage differential signaling (LVDS)
 transmission is used to reduce the number of
 data cables from the hub board to module,
 increase the transmission distance, and improve
 the signal transmission quality and
 electromagnetic compatibility (EMC).

Improvements to Reliability

• Dual card backup and status monitoring In an application with requirements for high reliability, two receiving cards can be mounted onto a single hub board for backup. If the main receiving card fails, the backup card can serve immediately to ensure uninterrupted operation of the display.

The working status of the main and backup receiving cards can be monitored in NovaLCT V5.2.0 or later.

- Loop backup The receiving card and sending card form a loop via the main and backup line connections. If a fault occurs at a location of the lines, the screen can still display the image normally.
- Dual backup of the application program
 Two copies of the application program are stored
 in the receiving card at the factory to avoid the
 problem that the receiving card may get stuck
 due to program update exception.

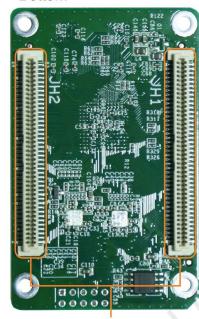

Appearance

Top

Power Running Indicator

Bottom

High-Density Connectors

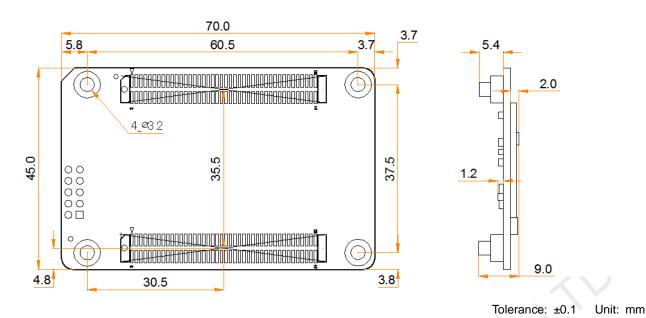

All product pictures shown in this document are for illustration purpose only. Actual product may vary.

Indicators

Indicator	Color	Status	Description
Running indicator	Green	Flashing once every 1s	The receiving card is functioning normally. Ethernet cable connection is normal, and video source input is available.
		Flashing once every 3s	Ethernet cable connection is abnormal.
		Flashing 3 times every 0.5s	Ethernet cable connection is normal, but no video source input is available.
1	4	Flashing once every 0.2s	The receiving card failed to load the program in the application area and now is using the backup program.
NY		Flashing 8 times every 0.5s	A redundancy switchover occurred on the Ethernet port and the loop backup has taken effect.
Power indicator	Red	Always on	The power supply is normal.

Dimensions

The board thickness is not greater than 2.0 mm, and the total thickness (board thickness + thickness of components on the top and bottom sides) is not greater than 9.5 mm. Ground connection (GND) is enabled for mounting holes.

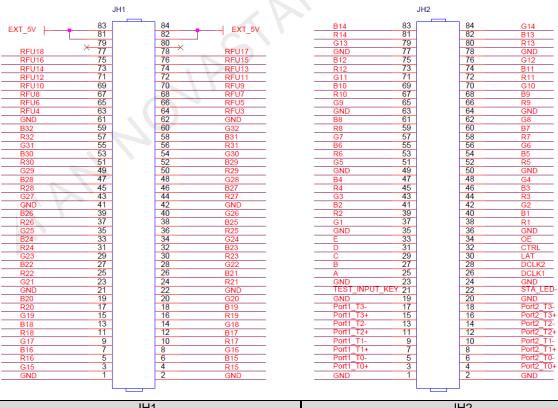

Note

The distance between outer surfaces of the AT32 and HUB boards after their high-density connectors fit together is 8.0 mm. An 8-mm copper pillar is recommended.

Pins

Reference Design for Extended Functions

	Description of Pins for Extended Functions						
Pin	Recommended Module Flash Pin	Recommended Smart Module Pin	Description				
RFU4	HUB_SPI_CLK	(Reserved)	Clock signal of serial pin				
RFU6	HUB_SPI_CS	(Reserved)	CS signal of serial pin				
RFU8	HUB_SPI_MOSI	/	Module Flash data storage input				
KFU6	/	HUB_UART_TX	Smart module TX signal				
RFU10	HUB_SPI_MISO	/	Module Flash data storage output				
RFUIU	/	HUB_UART_RX	Smart module RX signal				
RFU3	HUB_0	CODE0					
RFU5	HUB_C	CODE1	Madula Flack PLIC control nin				
RFU7	HUB_0	CODE2	Module Flash BUS control pin				
RFU9	HUB_0	CODE3					
RFU14	POWER	Dual power supply detection signal					
RFU16	POWER	R_STA2	Duai power suppry detection signal				
RFU15	MS_I	DATA	Dual card backup connection signal				
RFU17	MS	_ID	Dual card backup identifier signal				

The RFU8 and RFU10 are signal multiplex extension pins. Only one pin from either the Recommended Smart Module Pin or the Recommended Module Flash Pin can be selected at the same time.

Specifications

Maximum Loading Capacity	512 x 384 pixels			
Electrical Specifications	Input voltage	DC 3.3 V to 5.5 V		
Specifications	Rated current	0.6 A		
IN	Rated power consumption	3.0 W		
Operating Environment	Temperature	-20°C to +70°C		
Limionnent	Humidity	10% RH to 90% RH, non-condensing		
Storage Environment	Temperature	-25°C to +125°C		
Environment	Humidity	0% RH to 95% RH, non-condensing		
Physical Specifications	Dimensions	70.0 mm × 45.0 mm × 9.0 mm		
Specifications	Net weight	16.5 g		
Packing Information	Packing specifications	Each receiving card is packaged in a blister pack. Each packing box contains 80 receiving cards.		
	Packing box dimensions	378.0 mm × 190.0 mm × 120.0 mm		

www.novastar.tech

Certifications	RoHS, EMC Class B
----------------	-------------------

The amount of current and power consumption may vary depending on factors such as product settings, usage, and environment.
