## **Change History**

| Document Version | Release Date | Description                                  |
|------------------|--------------|--|
| V1.1.4           | 2021-12-03   | Updated the certification description.       |
|                  |              | Updated the description of features.         |
| V1.1.3           | 2021-08-18   | Updated the side-view dimensions diagram.    |
| V1.1.2           | 2021-07-30   | Updated the description of features.         |
|                  |              | Added the certification related description. |
| V1.1.1           | 2021-02-06   | Updated the appearance diagrams.             |
|                  |              | Updated the packing information.             |
| V1.1.0           | 2020-11-18   | Updated the product appearance diagram.      |

## Introduction

The A5s Plus is a general small receiving card developed by NovaStar. A single A5s Plus loads up to 512×384 pixels (NovaLCT V5.3.1 or later required). Supporting color management, 18bit+, pixel level brightness and chroma calibration, individual gamma adjustment for RGB, and 3D functions, the A5s Plus can significantly improve the display effect and user experience.

The A5s Plus uses high-density connectors for communication to limit the effects of dust and vibration, resulting in high stability. It supports up to 32 groups of parallel RGB data or 64 groups of serial data (expandable to 128 groups of serial data). Its reserved pins allow for custom functions of users. Thanks to its EMC Class B compliant hardware design, the A5s Plus has improved electromagnetic compatibility and is suitable for various on-site setups.

## **Certifications**

RoHS, EMC Class B

If the product does not have the relevant certifications required by the countries or regions where it is to be sold, please contact NovaStar to confirm or address the problem. Otherwise, the customer shall be responsible for the legal risks caused or NovaStar has the right to claim compensation.

### **Features**

#### Improvements to Display Effect

Color management
 Allow users to freely switch the color gamut of the screen between different gamuts in real time to enable more precise colors on the screen.

- 18bit+ Improve the LED display grayscale by 4 times to avoid grayscale loss due to low brightness and allow for a smoother image.
- Pixel level brightness and chroma calibration
   Work with the high-precision calibration system
   to perform brightness and chroma calibration on

- each LED to effectively remove brightness differences and chroma differences, enabling high brightness consistency and chroma consistency.
- Quick adjustment of dark or bright lines
   The dark or bright lines caused by splicing of
   cabinets or modules can be adjusted to improve
   the visual experience. This function is easy to
   use and the adjustment takes effect immediately.

   In NovaLCT V5.2.0 or later, the adjustment can

In NovaLCT V5.2.0 or later, the adjustment can be performed without using or changing the video source.

- Low latency
   The latency of video source on the receiving card end can be reduced to 1 frame (only when using modules with driver IC with built-in RAM).
- 3D function
   Working with the sending card that supports 3D function, the receiving card supports 3D image output.
- Individual gamma adjustment for RGB
  Working with NovaLCT (V5.2.0 or later) and the
  sending card that supports this function, the
  receiving card supports individual adjustment of
  red gamma, green gamma and blue gamma,
  which can effectively control image nonuniformity at low grayscale conditions and white
  balance offset, allowing for a more realistic
  image.
- Image rotation in 90° increments
   The display image can be set to rotate in multiples of 90° (0°/90°/180°/270°).

#### **Improvements to Maintainability**

- Smart module (dedicated firmware required)
  Working with the smart module, the receiving
  card supports module ID management, storage
  of calibration coefficients and module
  parameters, monitoring of module temperature,
  voltage and flat cable communication status,
  LED error detection, and recording of the
  module run time.
- Automatic module calibration
   After a new module with flash memory is installed to replace the old one, the calibration coefficients stored in the flash memory can be automatically uploaded to the receiving card when it is powered on.
- Quick uploading of calibration coefficients
   The calibration coefficients can be quickly uploaded to the receiving card, improving efficiency greatly.
- Module Flash management
   For modules with flash memory, the information stored in the memory can be managed. The

- calibration coefficients and module ID can be stored and read back.
- One click to apply calibration coefficients in module Flash
   For modules with flash memory, when the Ethernet cable is disconnected, users can hold down the self-test button on the cabinet to upload the calibration coefficients in the flash memory of the module to the receiving card.
- Mapping function
   The cabinets display the receiving card number and Ethernet port information, allowing users to easily obtain the locations and connection topology of receiving cards.
- Setting of a pre-stored image in receiving card
  The image displayed during startup, or displayed
  when the Ethernet cable is disconnected or
  there is no video signal can be customized.
- Temperature and voltage monitoring
   The temperature and voltage of the receiving
   card can be monitored without using peripherals.
- Cabinet LCD
   The LCD module connected to the cabinet can display the temperature, voltage, single run time and total run time of the receiving card.
- Bit error detection
   The Ethernet port communication quality of the receiving card can be monitored and the number of erroneous packets can be recorded to help troubleshoot network communication problems.

   NovaLCT V5.2.0 or later is required.
- Status detection of dual power supplies
   When two power supplies are used, their working status can be detected by the receiving card
- Firmware program readback
   The firmware program of the receiving card can be read back and saved to the local computer.

   NovaLCT V5.2.0 or later is required.
- Configuration parameter readback
   The configuration parameters of the receiving card can be read back and saved to the local computer.
- LVDS transmission (dedicated firmware required)
   Low-voltage differential signaling (LVDS)
   transmission is used to reduce the number of
   data cables from the hub board to module,
   increase the transmission distance, and improve
   the signal transmission quality and
   electromagnetic compatibility (EMC).

#### **Improvements to Reliability**

Dual card backup and status monitoring
 In an application with requirements for high
 reliability, two receiving cards can be mounted

onto a single hub board for backup. When the primary receiving card fails, the backup card can serve immediately to ensure uninterrupted operation of the display.

The working status of the primary and backup receiving cards can be monitored in NovaLCT V5.2.0 or later.

Loop backup

The receiving cards and the sending card form a loop via the primary and backup line connections. When a fault occurs at a location of the lines, the screen can still display the image normally.

• Dual backup of configuration parameters

The receiving card configuration parameters are stored in the application area and factory area of the receiving card at the same time. Users usually use the configuration parameters in the application area. If necessary, users can restore the configuration parameters in the factory area to the application area.

Dual program backup

Two copies of firmware program are stored in the application area of the receiving card at the factory to avoid the problem that the receiving card may get stuck abnormally during program update.

## **Indicators**

| Indicator         | Color                       | Status                      | Description   |
|-------------------|-----------------------------|-----------------------------|---|
| Running indicator | Green                       | Flashing once every 1s      | The receiving card is functioning normally. Ethernet cable connection is normal, and video source input is available. |
|                   |                             | Flashing once every 3s      | Ethernet cable connection is abnormal.  |
|                   |                             | Flashing 3 times every 0.5s | Ethernet cable connection is normal, but no video source input is available.  |
|                   |                             | Flashing once every 0.2s    | The receiving card failed to load the program in the application area and is now using the backup program.            |
|                   | Flashing 8 times every 0.5s |                             | A redundancy switchover occurred on the Ethernet port and the loop backup has taken effect.                           |

| Indicator       | Color | Status    | Description                |
|-----------------|-------|-----------|----------------------------|
| Power indicator | Red   | Always on | The power input is normal. |

## **Dimensions**

The board thickness is not greater than 2.0 mm, and the total thickness (board thickness + thickness of components on the top and bottom sides) is not greater than 8.5 mm. Ground connection (GND) is enabled for mounting holes.

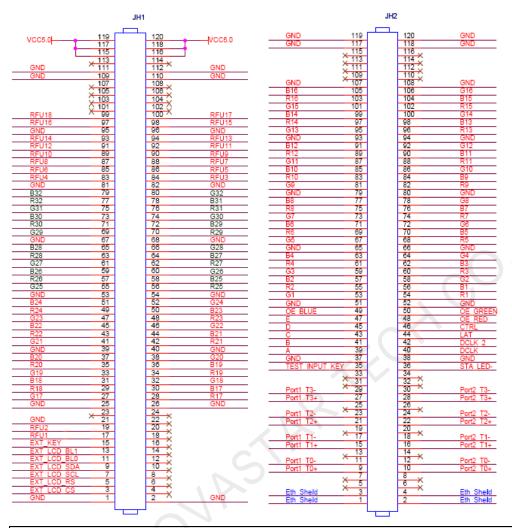

Note

The distance between outer surfaces of the A5s Plus and hub boards after their high-density connectors fit together is 5.0 mm. A 5-mm copper pillar is recommended.

The recommended VCC power input is 5.0 V.

OE\_RED, OE\_GREEN and OE\_BLUE are display enable signals. When RGB are not controlled separately, use OE\_RED. When the PWM chip is used, they are used as GCLK signals.

In the mode of 128 groups of serial data, Data65-Data128 are multiplexed into Data1-Data64.

| RFU11                       | HUB_H                           | 164_CSD                         | 74UC464 data signal                |  |  |  |
| RFU13                       | HUB_H                           | 164_CLK                         | 74HC164 data signal                |  |  |  |
| RFU14                       | POWE                            | R_STA1                          | Dual newer supply detection signal |  |  |  |
| RFU16                       | POWE                            | R_STA2                          | Dual power supply detection signal |  |  |  |
| RFU15                       | MS_                             | DATA                            | Dual card backup connection signal |  |  |  |
| RFU17                       | MS                              | S_ID                            | Dual card backup identifier signal |  |  |  |

The RFU8 and RFU10 are signal multiplex extension pins. Only one pin from either the Recommended Smart Module Pin or the Recommended Module Flash Pin can be selected at the same time.

## **Specifications**

| Maximum<br>Loading Capacity | 512x384 pixels          |   |
|-----------------------------|-------------------------|---|
| Electrical<br>Parameters    | Input voltage           | DC 3.3 V to 5.5 V   |
|                             | Rated current           | 0.6 A   |
|                             | Rated power consumption | 3.0 W   |
| Operating<br>Environment    | Temperature             | -20°C to +70°C  |
|                             | Humidity                | 10% RH to 90% RH, non-condensing  |
| Storage<br>Environment      | Temperature             | -25°C to +125°C   |
|                             | Humidity                | 0% RH to 95% RH, non-condensing   |
| Physical<br>Specifications  | Dimensions              | 70.0 mm × 45.0 mm × 8.0 mm  |
|                             | Net weight              | 16.2 g  Note: It is the weight of a single receiving card only.   |
|                             | Gross weight            | 1.2 kg  Note: It is the total weight of the products, printed materials and packing materials packed according to the packing specifications. |
| Packing                     | Packing specifications  | Each receiving card is packaged in a blister pack. Each   |
